

SYDEREUS NUNCIUS,
OR AN
EPHEMERIS

For the Year of *Humane Redemption*, 1686.

And from the Creation according to *HOLY WRIT* 5635.

CONTAINING

The Longitude and Latitude of the Planets,

With a TABLE of HOUSES,

Astrological Judgements, Monthly Observations,

the State of the *Weather*, Change of the *Moon*, length of the *Day*

and *Night*, Rising and Setting of the *Sun* and *Moon*, *Terms* and

their Returns, *Tides*; A Catalogue of *Bishops* and *Popes* of *Rome*,

General Councils and *Decrees*, *Chronology*, several useful *Tables*,

and other things never before Published.

CALCULATED

For the *Meridian* of *DUBLIN*, whose Latitude is 53 degrees 20

min. North; but may indifferently serve all *Ireland*, *England*,

Scotland, and *Wales*. To which is Added, plain and easy Instru-

ctions, by which any that can but read *English*, may learn to Set

a Figure.

By John Whalley Student in Physick and Astrology.

Gen. 1. 4. And God said, Let there be lights in the Firmament of
the Heaven, to divide the day from the night; and let them be
for signs, and for seasons, and for days, and years.

Judges 5. 20. They fought from Heaven, the Stars in their Course
fought against Sisera.

Since hence God made (as by the Text appears)

The Stars as SIGNS, for seasons, days and years;

And for to Fight, as they move in their course,

Who dare deny their influence or force.

Or who so blind to blame Astrologers

For thence predicting Plenty, Peace, or Wars,

Health, Sickness, Famine, or what may relate

Unto each person, thing, or tottering State.

DUBLIN, Printed by Benjamin Tooke, Printer to the Kings Most
Excellent Majesty; and are to be Sold by Andrew Crook at the
Kings Printing House on Ormonde Key, and by Samuel Halseham
at the Colledge Arms in Castle-street. 1686.

To all Ingenious and true Lovers of the Divine Urania in the Kingdom of Ireland, &c.

GENTLEMEN,

THe good Opinion many of you (the only competent Judges that I write; as well as many others) were pleased to have, and express personally and by Letters, from several parts of the Kingdom, of what I presented to the world last Year, offers me just occasion to hope for your no less kind Acceptance and favourable Opinion of this, which contains (besides what that did) what you have often requested from me (viz.) the Longitude and Latitude of the Eraticks; and a Table of Houses calculated, to the Meridian of Dublin, with other things never before published; which I have three years past constantly composed, and desired to present you with; though hitherto eclipsed from your sight, by the malicious Clouds of ambitious, aspiring, covetous, envious Varlets; who not being capable of good themselves, abhor it in others; nay, rather than permit it, will leave no stone unturned to bereave those of Life that shall attempt it; but I bless him, who in spite of all their damnable Intrigues and Contrivances against me (under my M. C. to the S of H line & cum Lat.) hath supported me, to requite their kindness under a better Direction nearly operating; and present the world with this; which if kindly received, comes not too late; but if not, it comes too soon.

The Planets places in this are reduced (as often as they admit thereof) to the Meridian of Dublin from Mr. Gadburys Ephemerides, which (notwithstanding the contrary Assertions of some no meanly conceited Artists) have been proved the most exact of all others, by the late triple Conjunction of H and V; and my worthy Friend, Jonathan A-land of the City of Waterford Esq; in many Observations made for the Verification of his late, but most absolute, familiar, easie Discovery of the true (though so long sought for) Longitude, or Meridian Distances of Places, lately approved of by the Honorable Society and University of Dublin, &c. and as easie to be found, as to reduce the Planets in this or any other Ephemeris to any certain hour of the day, now speedily to be printed, to the great advantage of Travellers, and Advancement of the Art of Navigation, which, with some of your Contributions, may in a short time demonstrate to the world, that Ireland is not inferior to other Kingdoms for able Artists; for the confirmation of which no Desire or Endeavour shall be wanting in,

GENTLEMEN,

July the 7th.
1685.

Yours and Urania's Servant
JOHN WHALLEY

A Table of the Moons Latitude.

| Sign | Sign | Sign | Sign |
|--------|-------|-------|------|
| | | | |
| O. VI. | IV. | II. | III. |
| G. M. | G. M. | G. M. | G. |
| 00 | 02 | 30 | 420 |
| 01 | 02 | 39 | 429 |
| 02 | 11 | 23 | 429 |
| 03 | 16 | 4 | 427 |
| 04 | 21 | 4 | 430 |
| 05 | 26 | 52 | 432 |
| 06 | 31 | 5 | 432 |
| 07 | 37 | 14 | 436 |
| 08 | 42 | 3 | 438 |
| 09 | 47 | 9 | 440 |
| 10 | 52 | 13 | 442 |
| 11 | 57 | 17 | 444 |
| 12 | 1 | 2 | 441 |
| 13 | 1 | 8 | 447 |
| 14 | 1 | 13 | 448 |
| 15 | 1 | 18 | 450 |
| 16 | 1 | 23 | 451 |
| 17 | 1 | 28 | 452 |
| 18 | 1 | 33 | 453 |
| 19 | 1 | 38 | 454 |
| 20 | 1 | 43 | 455 |
| 21 | 1 | 47 | 456 |
| 22 | 1 | 51 | 457 |
| 23 | 1 | 57 | 458 |
| 24 | 2 | 2 | 459 |
| 25 | 2 | 7 | 459 |
| 26 | 2 | 12 | 459 |
| 27 | 2 | 16 | 459 |
| 28 | 2 | 21 | 459 |
| 29 | 2 | 25 | 459 |
| 30 | 2 | 30 | 459 |

Example, If the Moon be distant from the ☾ or ☿ 12 deg. her Latitude is 1 deg. 2 min. but if one sign 12 deg. distant, her Lat. is 3 deg. 21 min. but if distant 2 signs 12 deg. her Lat. is 4 deg. 45 min. By the same rule I enter the column ascending on the left hand, with 3 signs 12 deg. and find her Lat. is 4 deg. 53 min. and so of the rest: where note, if the separate from ☾, her Lat. is North; but if from ☿ South.

Enter this Table with the Moons distance in degrees either from the ☾ or ☿ in the left hand column descending, or the right ascending, and in some of the middle columns is the Moons Lat.

| Month days | Week days | Festival Days. Mutual Aspects, and Weather. | Moons age | Monthly Observations. | Rom. Account |
|------------|-----------|---|-----------|---|--------------|
| | | | | This Month affords but one <i>partile</i> | |
| 1d | | The Month be- | 19 | <i>mutual Aspect</i> ; and that is a <i>Square</i> | 11 |
| 2c | | <i>Candelmas-day</i> | 20 | of <i>Jupiter</i> and <i>Mercury</i> , and that not | 12 |
| 3f | | gins and con- | 21 | till the latter end thereof: But <i>Mars</i> | 13 |
| 4g | | tinues wet most | 22 | and <i>Venus</i> all the month friendly ac | 14 |
| 5a | | D 3 ly to the | 23 | company each other through <i>Aries</i> , | 15 |
| 6b | | end, but not | 24 | <i>Englands Horoscope</i> , in <i>trine</i> to the | 16 |
| 7C | | <i>Sexagesima</i> | 25 | winged Herald <i>Mercury</i> , who from | 17 |
| 8d | | D perig. ex- | 26 | the 26th of <i>December</i> till the second of | 18 |
| 9e | | ceeding cold, | 27 | <i>March</i> , makes a tedious unusual transit | 19 |
| 10f | | yet towards the | 28 | through <i>Aquary</i> , and so continues in | 20 |
| 11g | | months end | D | <i>reception</i> with <i>Saturn</i> 67 days, which | 21 |
| 12a | | <i>Term ends.</i> | 1 | for the present may be comfortable to | 22 |
| 13b | | it will prove | 2 | <i>England</i> , and consequently to us; and | 23 |
| 14C | | <i>Valentine.</i> | 3 | much mitigate some of those <i>Evils</i> | 24 |
| 15d | | pretty sharp. | 4 | threatned by the <i>malevolent Aspects</i> | 25 |
| 16e | | <i>Shrove-Tuesd.</i> | 5 | of the last month; and the late <i>Eclipse</i> | 26 |
| 17f | | Cold and wet. | 6 | therein mentioned, still operating, and | 27 |
| 18g | | Fine weather | 7 | for the present seems to put a stop to | 28 |
| 19a | | D cum 3 | 8 | the career of mischief thereby signi- | 29 |
| 20b | | near this time. | 9 | fied; but now more leisurely than be- | 30 |
| 21C | | <i>Quadragesima.</i> | 10 | fore managed, yet fast enough to re- | 4 |
| 22d | | D Apog. more | 11 | quite its promoters with the punish- | 5 |
| 23e | | wet and snow- | 12 | ment justly due to such as dare to of- | 6 |
| 24f | | <i>St. Matthias.</i> | 13 | fend, in <i>contradicting</i> , or opposing the | 7 |
| 25g | | ☿ ♀ like, &c | 14 | just decree of the Lord, or his Anoin- | 8 |
| 26a | | tempestuous | 15 | ted. Yet the Merchant will have cause | 9 |
| 27b | | at this time. | 16 | to complain of Shipwracks, and losses | 10 |
| 28C | | 2 <i>Sund. Lent.</i> | 17 | by storms and tempests, and perhaps | |
| | | | | some others, for the effect of their un- | |
| | | | | just contrivances. | |

Last Quarter the 5th. day, 11 min. past 10 at night.

New Moon the 12th. day, 52 min. past 2 in the afternoon.

First Quarter the 20th. day, 18 min. past 3 in the morning.

Full Moon the 28th. day, 7 min. past 4 in the morning.

| month days | Festival Days, Mutual Asp. Ets, and Weather. | Moons age | Monthly Observations. | Ro. Account |
|------------|---|-----------|---|-------------|
| 1 g | The month | 21 | Besides what I mentioned the last | 11 |
| 2 a | Visit. V. M. | 22 | month, of the position and Confi- | 12 |
| 3 b | begins pleasant, | 23 | gurations of the heavenly bodies at | 13 |
| 4 C | 5 p. Trin. but | 24 | the Ingress, &c. it may not be a- | 14 |
| 5 d | $\Delta \Psi \text{ } \text{♀}$ soon | 25 | miss farther to consider here, what | 15 |
| 6 e | ☾ becomes | 26 | (for want of room) I was forced to | 16 |
| 7 f | $\text{♂} \text{ } \text{♂} \text{ } \text{☉}$ wet and | 27 | omit there; and that is, that <i>Sol</i> and | 17 |
| 8 g | windy, attended | 28 | <i>Luna</i> , both at the Ingress and <i>Luna-</i> | 18 |
| 9 a | with misty mor- | 29 | <i>tion</i> preceding, were squar'd by <i>Sa-</i> | 19 |
| 10 b | $\text{♂} \text{ } \text{♂} \text{ } \text{♀}$ nings, | 30 | <i>turn</i> , from the place of <i>Mars</i> , at the | 20 |
| 11 C | 6 p. Trin. but | 1 | first appearance of the great Comet | 21 |
| 12 d | $\text{♂} \text{ } \text{☉} \text{ } \text{♀}$ mostly | 2 | 1685. to their own and the said Co- | 22 |
| 13 e | $\text{♂} \text{ } \text{♂} \text{ } \text{♀}$ wet and | 3 | <i>met's</i> opposite place at the same time, | 23 |
| 14 f | weeping, with | 4 | (viz. December the 13th.) and <i>Luna</i> | 24 |
| 15 g | St. Swithin, who | 5 | applying to the body of <i>Mars</i> ; and | 25 |
| 16 a | forgets not | 6 | at the succeeding <i>Lunation</i> to an op- | 26 |
| 17 b | $\text{♂} \text{ } \text{☉} \text{ } \text{♂}$ himself. | 7 | <i>position</i> of him in <i>Conjunction</i> with | 27 |
| 18 C | 7 p. Trin. $\square \Psi \text{ } \text{♀}$ | 8 | <i>Sol</i> in the eighth; which with the | 28 |
| 19 d | Dog days begin, | 9 | <i>Square</i> of <i>Mercury</i> from the seventh | 29 |
| 20 e | but bite not in | 10 | to <i>Saturn</i> in the ninth, confirms my | 30 |
| 21 f | <i>Ireland</i> . Much | 11 | judgment of the latter end of the 1st | 31 |
| 22 g | $\square \text{ } \text{♂} \text{ } \text{♀}$ rain | 12 | month, in this, and adds thereunto | Aug. |
| 23 a | and stormy | 13 | many fraudulent, mischievous con- | 1 |
| 24 b | weather may | 14 | trivances, which may for a short time | 2 |
| 25 C | St. James. be | 15 | flatter the promoters with vain hopes | 3 |
| 26 d | expected most | 16 | of future success. Most true it is, that | 4 |
| 27 e | $\square \text{ } \text{☉} \text{ } \Psi$ part of | 17 | Honesty is the best Policy; and such | 5 |
| 28 f | the whole | 18 | as now devise otherwise, will find an | 6 |
| 29 g | month, with | 19 | swerable success. Oh! the madness | 7 |
| 30 a | hunder towards | 20 | and folly that possesseth such as will | 8 |
| 31 b | $\square \Psi \text{ } \text{♂}$ the end. | 21 | not be advised to prosecute their own | 9 |
| | | | comfort The $\text{♂} \text{ } \text{☉} \text{ } \text{♂}$ makes Eng- | 10 |
| | | | lands Monarch honoured & happy. | |

| 1 | d | All Saints | 25 | It is not amiss here to observe, that besides the late plotting Conjunction of Saturn and Mars, there happens no less then six other mutual Conjunctions last month, and this immediately preceding and succeeding it, without the interposition of any other Aspect except the Lunar. If you do but peruse the General Judgment in my last years Almanack, you may find such guts of Conjunctions, from wh ch I must observe to you something that Haly saith, Mars ciet in bel- <i>Sila, seditiones intestinas, captivitates, ecid: a urbium populi tumultus, Principum iras</i> ; And in regard Saturn and Mercury, the three malignants of Heaven, being chiefly concern'd in six of these seven Conjunctions, promote many secret meetings, weighty consultations, treacherous combinations, and mischievous practices; which will be conceal'd for a time. ☿ is ♂ to ♀ Germany take heed. | 1-12 |

| Days | Days | Hours | minutes | Days | Days | Hours | minutes | Hours | minutes | Hours | minutes | Hours | minutes |

The Use of the foregoing Table.

Note that the Table is divided into ten Columns, and so noted with great figures 1. 2. &c. now with the Moons age enter the first Column, and right against it in the second Column is the time of her shining, which (when she encreaseth) being added to the Hour and Minute of Sun rising or setting, or deduced thence (when she decreaseth) shews the time of her Rising and Setting; but if the time of Sun setting be less than the Moon shining, 12 hours must be added to it, that so Substraction may be made.

1. *Example.* On the 21th. day of *January* I find the Moon 8 days old: with this 8 I enter the first Column of the Table, and right against it in the second Column I find 6 hours 24 minutes the time of the Moons shining; then the same day I find the Sun riseth 38 minutes after 7. and sets 38 minutes before 5. (*viz.* 22 min. after 4. Now (because she increaseth) to the 6 hours 24 minutes (the time of the Moons shining) I add the 7 hours 15 minutes (the time of the Suns Rising) and the Sum is 14 hours 2 min. the time of the Moons Rising afternoon the 21th. day, that is, 2 min. past 2 the next morning: So likewise adding 4 hours 22 minutes, (the time of Sun-setting) to 6 hours 24 min. (the aforesaid time of the Moons shining) the Sum is 10 hours 46 min. the time of the Moons setting that evening.

2. *Example.* Of finding the Moons Southing, and hour of the night. On the 6th of *January* I find the Moon 22 days old, with which I enter the 3^d Column of the Table, and right against it in the second Column I find 5 hours 36 minutes for the time of her Southing; then repairing to a Sun-dial, I find the shadow a quarter of an hour past the stroke of 9. so that it wants 2 hours 45 min. of the stroke of 12. which I subtract from the 5 hours 36 minutes (the time of the Moons Southing,) and the remainder is 2 hours 51 minutes, which is the true time of the night: but if the shadow had been 3 quarters past 2, it ought to have been added to time of her Southing 5 hours 36 min. and then the time would have been 8 ho. 21 min. Note, that till the full, the Moon cometh to the South in the evening; but after the full, in the morning.

3. *Example.* Of finding the time of High Water at *Dublin Bridge*. On the eighth of *January*, when the Moon is 24 days old; with this 24 (the Moons age) I enter the 3^d Column of the Table, and from thence direct my Eye straight along towards the Right hand till I come to the tenth Column under *Dublin Bridge*, and there I find 5 hours 12 minutes the time of High Water after noon; because she is past the full, decreasing. Do the like in any of the other places.

A Catalogue of chief Pastors of Rome, with the r Names, Number Year of Consecration, Crowning and beginning; as they are recorded by the Sons of the Mother Church, and distinguished by others, who deny St. Peter ever to have been at Rome, and make *Linus* the first Bishop of that See, and *Joannes* the 8th, noted with an Astrisk thus *, to be a Woman called Pope *Joane*.

| 722 | 2 | London, the Virgin <i>Marys</i> Picture to be worshiped. |
| 720 | 22 | Rome condemned Emperor <i>Leo's</i> condemning Images. |
| 745 | 23 | Rome, against <i>Scotus</i> , and marrying with Kindred. |
| 755 | 24 | Constantinople, Image-worship decreed heathenish. |
| 770 | 25 | Tours, Homilies turned into rustick Latin. |
| 781 | 26 | Nice, voted the Image of Christ, &c. to be worshiped. |
| 794 | 27 | Frankfort, voted Image-worship and the last Council ill. |
| 813 | 28 | Carvillion, Debates about Images, but not yet decided. |
| 871 | 29 | Constantinople, Image worship decreed relative. |
| 955 | 30 | Canterbury, about Priests marrying, and Image worship. |
| 1250 | 31 | Rome, Debates and Questions about the real Presence. |
| 1051 | 32 | Versalles, <i>Berengarus</i> condemn'd for denying real presence. |
| 1060 | 33 | Milan, Marriage of the Clergy condemned. |
| 1074 | 34 | Euford, Marriage allowed again to the Clergy. |
| 1077 | 35 | Mentz, Clergy-marriage again disputed, not determined. |
| 1077 | 36 | Lateran, <i>Berengarus</i> owns real Presence, denies it again. |
| 1118 | 37 | Lateran, Sacraments of Penance & Sanctification allow'd. |
| 1131 | 38 | Cashel, the Popes Supremacy and Headship denied. |
| 1139 | 39 | Lateran, Rights of the Clergy and Confession ordered. |
| 1171 | 40 | Oxford, King <i>John</i> constituted King of Ireland. |
| 1194 | 41 | Lateran, against Laymen and Women Preaching. |
| 1200 | 42 | Carthage, Bishops should appoint Penance, &c. Purgatory. |
| 1215 | 43 | Lateran, confirmed the real Presence, <i>not till now done.</i> |
| 1273 | 44 | Lyons, confirmed the Popes Supremacy, <i>till now disputed.</i> |
| 1311 | 44 | Vienna, <i>Berengarius</i> Lust not tempted no Sin condemned. |
| 1414 | 46 | Constance, decreed Administration in one kind, <i>K-kill ng</i> . |
| 1431 | 47 | Basil, decreed the Catholick Church could not err. |
| 1439 | 48 | Florence, <i>Greeks</i> deny real Presence, own other things. |
| 1500 | 49 | Trent, Free-will disputed, Certainty of Faith condemned. |
| 1512 | 50 | Lateran, the Soul of Man defined immortal. |
| 1546 | 51 | Trent, against <i>Luther</i> , and reformed the Kalender. |

An Explanation of the Ephemeridis, and how to set a Figure.

1. An *Ephemeridis* (Astronemically taken) is a *Diary*, or *Day-book*, containg the dally motions of the *Planets* and *Dragons Head* thorough the *Zodiack*, calculated to the *Noontide* of every day throughout the whole year.

2. The *Zodiack* is a great Circle of the *Speear* divided into twelve equal parts, called *Signs*, (in order) named and charactered thus.

An Explanation of the Ephemerides; &c.

Aries ♈, 1. Taurus ♉, 2. Gemini ♊, 3. Cancer ♋, 4. Leo ♌, 5. Virgo ♍, 6. Libra ♎, 7. Scorpio ♏, 8. Sagittary ♐, 9. Capricorn ♑, 10. Aquary ♒, 11. Pisces ♓, 12. The first six are opposite to the last, thus;

3. Each of these Signs contain 30 degrees, and every degree 60 minutes, every minute 60 seconds, and so to thirds, fourths, fifths, &c. but this exactness is beyond my present task, the Planets places here being calculated only to Degrees and Minutes, which is exact enough, even for Nativities, or any other case whatsoever.

4. The Planets are in number 7, (viz.) Saturn ♄, Jupiter ♃, Mars ♂, Sol ☉, Venus ♀, Mercury ☿, Luna ☾, with the Dragons-head ☊. These seven Planets by various and unconstant motion are sometimes in one part or degree, and sometimes in another of the 12 Signs, thereby often making with each other various Aspects named and characterized thus, Conjunction ☉, Sextile ✎, Square ☐, Trine △, Opposition ☿.

5. The whole Sphere of Heaven is divided by the Horizon into two Hemispheres, and each of them by great Circles into 6 parts called Houses, making in all 12, as in the following Scheme or Figure, in which the lines represents those Circles, and for distinction sake called Cusps; each House still beginning at the Cusp of the same, and ending at the Cusp of the succeeding House, noted with great Figures about the sides thereof, against the middle of each House; in or on the Cusp of some of which; one or other of the aforeaid 12 Signs always ascend or descend in opposition to each other, thus: The 1st to the 7th. the 2d to the 8th. the 3d to the 9th. the 4th to the 10th. the 5th to the 11th. the 6th to the 12th. Now from the Signs on the Cusps, the Planets in the Signs, and their various Aspects, judgment is drawn concerning all sublunary matters; the finding of which is the purport of the preceding (and all other) Ephemerides and Tables of Houses; All which being understood; Observe,

First, the left hand page contains 6 columns, and of them, the first the days of the month, the second the days of the week, the third the Festival days, mutual Aspects, and Weather, the fourth the Moons age, the fifth monthly observations, and the sixth the days of the Month, according to the Roman or Foreign Account, which is ten days before ours; and at the bottom is the Change of the Moon: All which

An Explanation of the Ephemerides, &c.

which explaining themselves, need no other explanation.

Secondly, the *right hand page* contains 9 columns, the first the days of the month, the second the motion of ☉, the third of ♃, the fourth of ♄ the fifth of ♅, the sixth of ♆, the seventh of ♁, the eighth of ♀, the ninth of ♀ in degrees and minutes, with the *hour* when the *Moon* makes her *Aspects* to each of the other Planets, as is expressed at the top of each page and column: Where observe, that the figures under G. are *degrees*, those under H. *hours*, and those under M. *minutes*. S. stands for *signs*, and at the *bottom* of each page and column is the *Latitude* of each *Planet* at the top: the *first*, *eleventh*, and *twenty first* days of each month. N. stands for *North*, and S. for *South*, and below the cross line D. stands for *days*, but above it for *direct*, shewing the *Planet* under which it moves forward. R. stands for *Retrograde*, and where that happens in the middle of a column, the *Planet* over it begins then to go backward, and continues so to do till you meet with D. and then it becomes *direct*, and moves forward. Both these *right hand pages* and the *Table of Houses* are chiefly useful in *Navigation*, and setting or erecting *Schemes*, or *Celestial Figures*.

Example, In this *right hand page* the 9th. day of *March* I find nine in the first column toward the *left hand* under *Montk-Days*, and right against it toward the *right hand*, in the second column under ☉ in ♈ I find 29 under G: and 27 under M. which shews ☉ is that day at noon in 29 degrees and 27 minutes of ♈, (for the *Planets* places both in this and all other *Ephemerides* are calculated to the noon-tide of every day) and between 29 & 27 is * shewing that ♃ comes that day to a * of ☉, (but the time could not be inserted under it, as in most of the rest, because ☉ changing his sign before the next day at noon, the sign he next entered being ♏, is placed instead thereof;) and so casting my eye straight along from the aforesaid 9th day of the month, towards the right hand: in the third column, under ♃ in ♈, at the top, I find under G. 28. and under M. 58. and the next sign above them to be ♏, which shews that (though ♈ be at the top of the column) yet on that 9th. day of the month at noon ♃ is in 28 deg. and 58 min. of ♏, and right against that under ♄ II is 14. which shews ♄ is the same day at noon in 14. deg. of II, (for its motion not being above 3 min. and some odd seconds in 24 hours, it is needless to insert the minutes here;) and so casting my eye farther directly along the same line towards the right hand to the next column under ♅ in ♏, I find under G. 26: and under M. 18: which

News

An Explanation of the Ephemerides, &c.

shews H to be in 26 deg. and 18 min. of M the aforesaid 9th. day at noon, and between those 26 deg. and 18 min. so last found. I find 18 under H , and next above it right against the 8th. day of the month, a Δ , which shews that D comes to a Δ of H 18 hours after noon the 8th. day; that is, at 6 of the Clock in the morning the 9th. day; and so casting my eye straight along the same line to the next column under V in M , I there find under G . 22. and under M . 41. which shews that V is in 22 deg. 41 min. of M , and between 22 and 41 I find 14 under H . and in the next line above it $*$, which shews D comes to a $*$ of V at 2 of the Clock the 9th. day in the morning, (*viz.* 14 hours after noon the 8th. day, and in the next column towards the right hand in the same line under J in O I find under G . 8 deg. and under M . 38 min. for the place of J the same day at noon; and between them under H . a \square , and under that 17. which shews that D comes to a \square of J so many hours after noon the 9th. day, that is, at 5 the next morning. Observe the like in Q or Q for the same day, or any Planet, any other day. but remember, as in taking the place of the Moon, so in any other Planet, if any Sign be in the middle of any column below the top of the column, against any particular day; that after the day against which the said Sign is placed, the Planet must be reckon'd in that Sign so many degrees and minutes as you find against the day in which the Planets places is sought for; as, suppose I were to find the place of Q the 28th. day of *March* this year; in the right hand page of *March*, and in the first column thereof, toward the left hand, I seek for 28. but cannot find it, but in the place thereof, between 27 and 29 I find \odot , which shews the 28th. day to be Sunday, and casting my eye from thence in a direct line towards the right hand, till I come under Q in ∞ in the last column towards the right hand, and as in the former Examples I find 4 deg. 59 min. and 7 lines above them, in the same near the top I find γ , which shews that though Q was in ∞ at the beginning of the month, he continued there but two days, and then entred H , and continued there till the 21st. day, and then he entred γ ; and continued there to the months end, and on the 28th. day was in 14 deg. and 59 min. thereof, and on the 29th. day 17 deg. 2 min. so that he moves from noon the 28th. day, to noon the 29th. day, 2 deg. and 3 min. for which, proportion is to be made (according to the motion of this or any other Planet) to the time of the day for which any Figure is to be set; but of that more in the following Example of setting a Figure.

Of the Table of Houses, and setting a Figure.

Reader, observe that by mistake in the months of February D is placed instead of G at the top of each Colume, signifying Degrees.

3. The *Table of Houses* contains six pages, each page two parts, (making in all twelve, according to the motion of ☉ through the twelve Signs) and each part seven columes. In the first colume towards the left hand of each part is the *Right Ascension* of ☉ converted into *hours* and *minutes* of the natural day, and noted at the top *time from noon*; the second colume towards the right hand under do 10. are the *Degrees* to be placed on the Cusp of the tenth house of a *Scheam* or *Figure* of Heaven; and so in the rest, for the eleventh, &c.

4. To set or erect a *Scheam* or *Figure*, draw your *Square* into the following form & parts, and set down the time for which you would erect your Figure in the middle thereof, as in the following *Example*; then seek the place of ☉ in the *Ephemeridis* for the month and day desired, and with the whole *Degrees* thereof (rejecting the minutes) enter the second colume towards the left hand in the *Table of Houses* under the Sign ☉ is in, and do 10. and right against it in the next colume towards the left hand, under *time from noon*, you will find certain *hours* and *minutes*, to which add the *hours* and *minutes past noon* of the day for which the Figure is to be set (which you before set down in the middle of your *Scheam*) and if your two numbers so added exceed 24 *hours*, subtract 24 from their total, and with their Remainder enter the aforefaid first colume under *time from noon* again, and just against that number there so found, in a direct line towards the right hand are the *Signs* and *Degrees*, to be placed on the Cusps of the tenth, eleventh, twelfth, first second and third Houses of the Figure; and upon the Cusps of the fourth, fifth, sixth, seventh, eighth and ninth place the opposite *Signs* and *Degrees* still upon the opposite Houses, then take the places of the *Planets* and ☿ out of the *Ephemeridis* for the time proposed, and place them in their respective *Signs*, either before or after the *Degrees* on the Cusps of the House in which they are, according as they are lesser or greater: and opposite to the *Dragons head* ☊ place ☿ or *Dragons tail* in degrees &c. then for the part of *Fortune* subtract the *Sign*, *Degree* & *Minute* of ☉ from the *Sign*, *Degree* & *Minute* of D; and to their *Difference* add the *Sign*, *Degree* and *Minute* on the Cusp of the *Ascendant*, or first house of the Figure; and their *Sum* is the *Sign*, *Degree* and *Minute* of the part of *Fortune*, to be placed in its proper place of the Figure, charactered thus ⊕

An Example of setting a Figure.

Example of setting a Figure for the time when ☉ by this Ephe meriades enters the first scruple of Aries, in the Meridian of Dublin this year 1686. which happens 13 hours 25 minutes past noon the 9th of March, viz. the tenth day 25 minutes past one in the morning; this 9th day 13 hours 25 minutes I place in the middle of the following Figure, and after it P. M. signifying Post Meridiem, or past noon; or that the time for which my Figure is set, is so many hours and minutes past noon the 9th day, and is always to be so placed, after the time so set down after the noon preceding the time for which any Figure is set, unless by Subtraction you be minded to gain the time, any morning preceding the succeeding noon; and so instead of P. M. write A. M. for Ante Meridiem, or before noon, or mane for morning, as you fancy to order it; but the first is most easie for Learners.

Having thus placed and ordered my time, I turn to the month of March; and in the right hand page on the 9th day at noon, I find ☉ in 29 deg. 27 min. of ♈, as in the former Example, where note, if the minutes had exceeded or been 30, it ought to have been added to my 29 degrees as one whole degree, to make them 30 degrees; but being less I reject them, and bearing the 29 degrees in mind, I turn to the Table Houses till I find Sol in Pisces at the top (in the very last part of the Table,) and in the second column under do. 10. I find ♈, the Sign ☉ is in; and casting my eye straight down, along the same column, towards the bottom I find 29, the aforesaid degree of ☉, and right against that 29. in the next column toward the left hand, under time from noon, I find 23 hours 56 minutes; and thereunto add my 13 hours 25 minutes (before set down in the middle of my Figure;) and their sum is 37 hours 21 minutes, which is more then the extent of the Table; and therefore I cast away 24, and the Remainder is 13 hours 21 minutes, which I seek again in the aforesaid great column under time from noon; and find it near the bottom of that part under Sol in Libra, (but if I had not found it exactly, I must have taken the nearest sum to it:) and right against these 13 hours 21 minutes in the next column towards the right hand, under do. 10. I find 22 degrees, and above it at the top ♎, which shews that 22 degrees of ♎ is to be placed on the Cusp of the tenth house, as in the following Figure; and so casting my eye straight along the same line towards the right hand, in the third column under do. 11. I find 12. and the next Sign above it (between that and the top) ♍; which shews that though

An Example of setting a Figure.

☿ is at the top of the colume; yet 12 degrees of ♀ is to be placed on the Cusp of the 11th house: in the 4th colume under *do.* 12. is 28 degrees, and at the top ♀; which I place on the Cusp of the 12th house, in the 5th colume under the *Ascendant* 16 degrees 58 min. and above at the top ♄; which I place on the Cusp of the *Ascendant* or *first* house (which is all one): in the 6th colume under *do.* 2. I find 21, and above it almost at the top ♀; and therefore I place ♀ 21 degrees upon the Cusp of the *second* house: and in the 7th colume under *do.* 3. I find 15, and between it and the top ☿ and place it on the Cusp of the *third* house, as in the following Figure. Having thus obtain'd and placed the proper *Signs* and *Degrees* on the *Cusps* of the 6 *Oriental* or *Emsterly* houses, (the Table containing no more) according to the *Directions*, I place the *opposite signs* and *degrees* on the *cusps* of the *opposite houses*; as ♀ 22 on the 4th, ☿ 12 on the 5th, ☿ 28 on the 6th, ♀ 16.58. on the 7th, ♄ 21 on the 8th, and ♀ 15 on the 9th, but because ♀ and ☿ possess each the *Cusp* of two houses, I find but ten of the twelve *Signs* on the *Cusps* of the twelve houses, so that ♀ and ☿ are wanting; and by beginning at ♀, and *numbring* the *Signs* according to their *due succession*; I find the place of ♀ betwixt ♄ and ♀ (as you may perceive in the *Explanation* of the *Ephemeridis*;) and therefore I place him intercepted in the 8th house, and ☿ in *opposition* thereunto intercepted in the *second*: sometimes two *Signs* are intercepted at once in one house; as when three degrees of ♄ are on the Cusp of the tenth; then 28 deg. 42 min. of ♀ will be upon the Cusp of the *Ascendant*; and ☿ and ☿ intercepted therein, and ♀ and ♀ intercepted in the 7th. Now note that if my Figure had been set just for noon, then once entering the *Table of Houses* had been sufficient; and 29 degr. of ☿ (the place of ☿ in the *Ephemerides*) must have been placed on the Cusp of the *tenth house*. But this by the way.

In the next place, I find all the *Planets places*, as in the former Example, for the *ninth* and *tenth* days of *March* at noon, and subtract the lesser from the greater, and the Difference is their *Diurnal Motions*.

| Thus, | D | ☉ | ☾ | ♂ | ♀ | ♂ | ♀ | ♂ | ♀ | ♂ | ♀ | ♂ | ♀ |
|-----------------|----|----|----|----|----|----|----|----|----|----|----|----|----|
| March { | 10 | 00 | 26 | 13 | 26 | 13 | 22 | 39 | 9 | 21 | 3 | 34 | 12 |
| | 9 | 29 | 27 | 28 | 58 | 26 | 18 | 22 | 40 | 8 | 38 | 3 | 22 |
| Diurnal motions | | 59 | 14 | 17 | | 51 | | 21 | 43 | | 12 | 1 | 38 |

An Example of setting a Figure.

Here I *subtract* all the *Planets* places (except h and v) the 9th day, from their places the 10th day: but of them the 10th day from their places the 9th day, because they are *retrograde*; and their *Difference* is their *Diurnal motion*.

Then I say by the *Rule of Three*, if 24 hours give the *Planets Diurnal motion*, what shall my *time past noon* give? which *proportion* so found, (if the Planet be *direct*) must be added to (but if *retrograde* subtracted from) its place the 9th day at *noon*; and the *Sum*, or *Remainder*, is the true place of the Planet at that time for which my Figure was set.

Example, of finding the true place of D March the 9th day, 13 hours 25 min. P. M. First I multiply 24 hours by 60, (the minutes in an hour) and the Sum is 1440 minutes. Secondly, the *Diurnal motion* of D is 14 deg. 17 min. the 14 deg. I multiply by 60, (the minutes in a Degree) and thereunto add the 17 minutes, and the Sum is 857 minutes. Thirdly my *time past noon* is 13 hours 25 min. the 13 hours I also multiply by 60; and to the Sum add the 25 min. and the Sum is 805 min. then, I say, if 1440, the minutes in 24 hours, give 857, the minutes of Luna's *Diurnal motion*, what will 805, the minutes of my *time past noon* give? I place my numbers thus, 1440—857—805. and multiply 857, my second number by 805, my third number, and it makes 698455, which I divide by 1440, my first number, and the *Quotient* will be 485 min. the *proportional part*; which I divide again by 60, and it gives 8 degrees 5 minutes for Luna's motion in 13 hours 25 min. now these 8 deg. 5 min. I add to 28 deg. 58 min. of v , the place of D the 9th day at *noon*; and it makes 7 deg. 3 min. of v for the place of D 13 hours 25 min. P. M. the time for which my Figure is set: by the same *Rule*, I reduce and find the places of all the other Planets, as in the following Figure, except h and v , whose *proportional part* I *subtract* from their place the 9th at *noon*, because they are *retrograde*; but this *Exactness* is needless, except in *calculating Nativities*, *Decumbitures*, and *critical Figures*, for finding the true time of *Accidents*, *Cause* and *Change* of *Distempers*, which I doubt is well understood but by few. In *Horary Questions* and the like, a *mental Reduction* in the Moons place will be sufficient by allowing about one Degree, for every two hours motion, past noon: and so if you please proportionally of the rest, according to their Motion.

An Example of setting a Figure.

To gain the *Part of Fortune*, I count from the beginning of γ to the beginning of δ one whole Sign; to the beginning of \approx ten whole Signs, and to the beginning of γ 12 whole Signs, as in the *Margent* on the right hand; and then according to the former Rule, I place my numbers as in the left hand *Margent*, and then *subtract* the place of \odot 00 S. 00 D. 00 M.

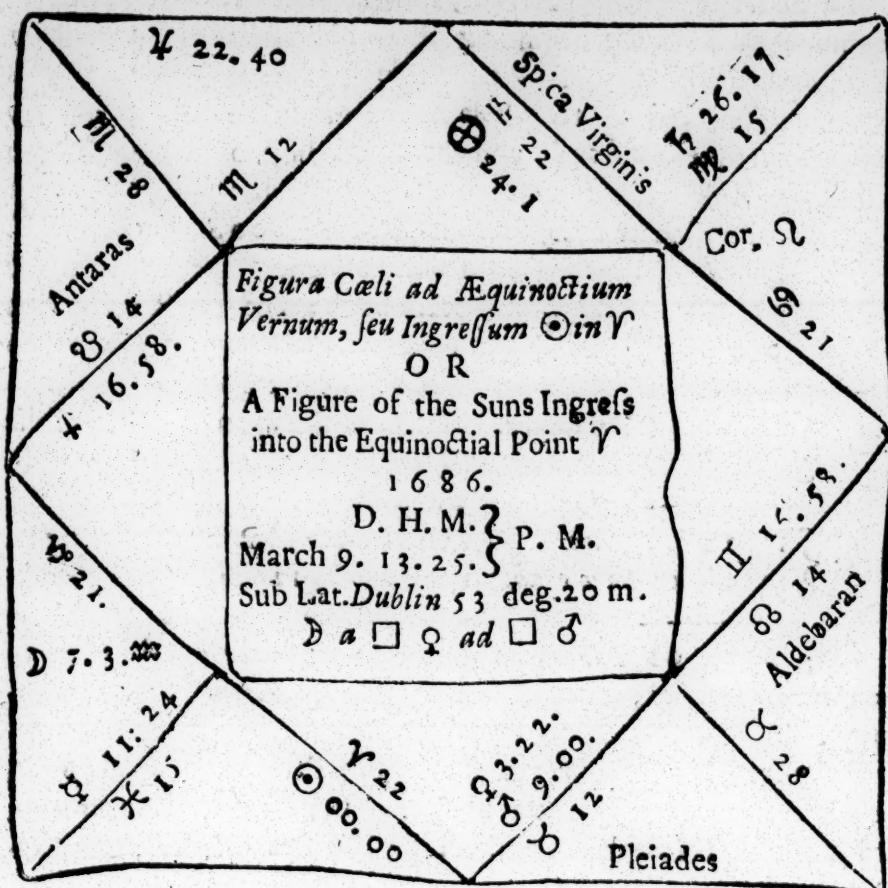

| S. | D. | M. | |
|---|----|----------|--------------------|
| γ 10 | 7 | 3 | } |
| \odot 00 | 00 | 00 | |
| | | | <i>subtract</i> |
| <hr style="width: 50%; margin-left: 0;"/> | | | |
| add | { | 10 7 3 | <i>Remainder.</i> |
| | { | 8 16 58 | <i>Ascendant.</i> |
| <hr style="width: 50%; margin-left: 0;"/> | | | |
| subtr: | { | 18 24 1 | <i>Sum.</i> |
| | { | 12 00 00 | <i>Circle sub.</i> |
| <hr style="width: 50%; margin-left: 0;"/> | | | |

\odot 6 24 \odot 1 *P. Fortune.* Degrees, 1 Minute for the place of the *Part of Fortune*; viz. \approx 24 Degrees 1 Minute: See the Figure.

To reduce this *Ephemeris* to the English Plantations of *America*, 'tis but adding about 6 hours motion to the *Planets* place at noon, and it gives its place there at noon; for it is *Sun-rise*, noon, and *Sun-set* about 6 hours sooner with us then it is with them.

Observe, that if I had been as exact as I ought, the Cusp of the tenth should be \approx 23 deg. and of the *Ascendant* 17 degr. 43 min. and so of the rest proportionably: but I have purposely omitted this nicety, because I would make the use of an *Ephemeris* plain to the meanest Capacity; as I intend, as conveniency shall permit, by other things hitherto intricately handled by other Authors. In the mean time read Mr. Partridges *Vade mecum*, *Salmons Horeæ Mathematicæ*, &c. of Astrology in English.

An Astrolological Judgment on the Year 1686.

Rigel (*Apho. 53.*) saith, *Fundamentum principale in revolutionibus annorum mundi est introitus solis, in primum punctum Arietis, porro multa necessaria ad hanc inquisitionem sunt, & scientia multorum, experimentorum & cognitionum superiorum præteritorum temporum & magnarum Eclipsationum, &c.* The principal foundation for judging *Revolutions* of the years of the World, is the *Suns* entrance into the first point of *Aries*, yet many more things do also conduce unto this disquisition; as the knowledge of many *Experiments*, and right understanding of former and greater times elapsed, *Eclipses*, great *Conjunctions*, and the like; But how, and in what manner those things are to be considered, I have not room here to shew, and therefore refer it to some more convenient place and time; which I do with the more willingness, because I have discoursed largely thereof, and of the legality and verity of *Astral Influence* in the *Observations of my Ephemeris*.

An Astrological Judgment on the Year 1686.

Ephemeris for the year 1683, Printed at his Majesties Printing-house in *Dublin*: And because the late *tragical transactions* of *Europe* have already loudly proclaimed to all that have but sense to eat an egg, the *dreadful Effects* of the two late *Comets*, and *triple Conjunction* of the Superior Planets, and other things mentioned both in that and my last years Almanack: As the *Turks* Invading, and being beaten out of *Germany*, the *Poles* Engaging against them, the Distractions of *England* and *Scotland* in 1683, and several other things both in the *monthly* and *general Observations*, too tedious to enumerate here; which I do not mention in ostentation of my own Acquirements, but to shew that there is a certain, as well as secret *Arcanum* to be found (though not by every spurious Pretender, or cheating *twelve-penny Rascal* or *Slut* wholly ignorant of the mysteries) in the Cabinet of *Astrology*, if unlock'd by such of her legitimate Children, to whom her self hath unfeignedly taught her more refin'd language, as witness *John Pious* Earl of *Mirandula*, who when endeavouring to nullify this heavenly Science, he signed its certainty with his last breath, according to the predictions of those against whom he writ, upon the the *Direction* of his *Ascendant* to *Mars*, in the three and thirtieth year of his age. And (not including my self the meanest of *Uranias* Servants) I am confident there are *Astrologers* now living in the Dominions of his Gracious Majesty of *Great Britain*, (though not many) that could point out particularly the most material of *mundane Revolutions* for time to come. However, I shall with all plainness proceed in general terms to unfold the portents of the *Cælestial* wanderers for this year, according to the preceding *Aphorism*; and so by casting my eye a little backward, I find, that at the first appearance of the great *Comet* at *Dublin* on the thirteenth of *December* 1680, *Mars* was in *Virgo*, the Domal Dignities of *Mercury* neer the degree of his *Conjunction* with *Saturn*, *Octob.* 1684. and that about the *seventh* and *twelfth* of *September* preceding the great *Conjunction* in *Octob.* 1682. he nettled *Saturn* and *Jupiter*, and *Mercury* was then in the very place of *Mars* at the first appearance of the great *Comet*; so that from hence I conclude *Europe* for several years yet to come, will not be free from more than ordinary mischiefs: according to that of the Apostle, 2 *Tim.* 3. 2, 3, 4, 5, *For men shall be lovers of themselves, covetous, boasters, proud, blasphemers, disobedient, unthankful, unholy, without natural affection, truce-breakers, false, accusers, incontinent, fierce, despisers of those that are good, traitors, heady, high-minded*

An Astrological Judgment on the Year 1686.

minded, lovers of pleasure more than of God, having a form of godliness, but denying it in the power thereof. And so, under the pretence of Religion, act all manner of wickedness, which occasioneth much bloodshed, wars, cruelties and contentions among Princes and people; besides what the Lord may be pleased to pour upon her, from Heaven, or from Turkish Infidels.

It is a strange thing people should be so stupified and blind, (by the *poysen and venome* of bosome-snakes) that neither the threatnings of Heaven, woful experience of others, nor their own daily sufferings will divert them from being led (like *Bears by the nose*) to stakes of perdition, purposely fostered in masquerade for their confusion. Can a man take fire in his bosome, and his clothes not be burnt? Can a man go upon hot coles, and his feet not be burnt? (Prov. 6. 27, 28.) as coals are to burning coals, and wood to fire, so is a contentious man to kindle strife, (chap. 26. ver. 21.) therefore as the fire devoureth the stubble, and the flame consumeth the chaff, so their root shall be rottenness, and their blossome shall go up as the dust, (Isa. 5. 24.)

How happy might the Babes of Europe be, if they would but study friendship, obedience, love, peace and unity half so much as they do contention and division, the ready road to destruction; for our Blessed Saviour saith, *Matth. 12. 25. That every Kingdom divided against it self is brought to desolation, and every City and House divided against it self shall not stand.* If the Princes of Europe would but now unite and joyn against the common enemy, they may this, and for two years yet to come, at least, not only regain what they have lately lost, but indeed do almost what they please with those Infidels; but their so great and unanimous friendship is much to be doubted as yet: for besides what is before mentioned, *Mercury* did not only dispose of the late *Conjunction* of *Saturn* and *Mars*, but also at the same time made a tedious transit of above two months through *Scorpio*, which some term a sign of *treachery, falsity, and mischief*; and so continues in reception with *Mars*, author of *strife* and *contentions* all that while, and that too from his place at the great *Conjunction*, *Octob. 1682.* And what still adds more fuel to the fire, he disposed of the *Eclipsed Moon* (in *November* last.) And *Saturn*, who from the *Ascendant squar'd*, not only him, but also *Sol* and the *Eclipsed Moon*; which, with humble submission to the more learned in this heavenly Science, and to tell troth time, in my opinion, doth not one jot abate the mischief that usually attends such *Congresses*; but on the contrary, extremely

An Astrological Judgment on the Year 1686.

extremely aggravates them, and threatens many evils to the common people of those places subject to the sign *Gemini*, where the defect happens; and of that number are the Countreys of *Egypt*, *Armenia*, *Flanders*, and the Cities of *Norimberg*, *Bruges*, and *London*, and seems to inform the world of more than common *mischievous*, *secret Combinations*, *contrivances* and *consultations*; the defect happening in the very degree of *Sol* in the *Emperor of Germanies Nativity*, bodes that *Illustrious Princes* care of one of his eyes, *treachery*, *mischiefs* of his subjects, *falls*, and *blows*, and then he need not doubt but to handle the *Turk* almost at pleasure, and bring him to his own terms; for if the present *Sultan* should survive many more years (which I believe he will not) he would doubtless lose the greatest part of his Dominions, and become most miserable, and that too chiefly through the means and actions of the present *Emperor of Germany*; for though many overtures of Peace may be made between those two mighty Emperors this year, yet they will scarce take any likely effect till the very latter end of this, or the beginning of the next year at soonest; nor then to much purpose.

Cardan (*seg. 5. Apho. 45.*) saith, *Eclipsis Luminarium super Civitates, Provincias & Regna, magis quam super privatae conditionis homines aut super Regis, Respiciunt enim multitudinem*: Eclipses of the Luminaries operate rather upon Cities, Provinces, and Kingdoms, than upon Kings, and men of private condition; their influence respect the multitude, therefore it is necessary for all those places above mentioned, to use means of prevention against *Ruptures*, *Frenzies*, *Plague*, *Calenture*, and such like giddy, Epidemical Distempers amongst the generality of the vulgar or common people, who during the effects of this *Eclipse*, will be more than usually subject to mischief and misfortunes; of which, see more in my observations thereof in my last years Almanack, and the three first months of this.

In the *Figure* of the *Brunal Ingress*, all the Planets; except *Saturn*, were under the *Earth*; and *Mercury* under the *Sun-beams*, and both squared by *Saturn* from the eleventh: and *Luna* separateth from *Mercury*, and applys to a Square of *Venus*; which shews much Quarrelling, Contention, Fraudulency, Division, Dissatisfaction, Undermining, and Treachery between one Neighbour and Friend and another, that they will endeavour to trepan, involve, ensnare and betray each other to destruction, and that during this *Winter Quar-*
ter (if it may be properly so called) there will be much secret mur-
muring

An Astrological Judgment on the Year 1686.

muring, grumbling, repining, consultation and mischievous contrivance among dissatisfied Spirits; but let them be careful how they meddle with *Government* and *Dominion*, for the Stars say, that whatever mischief may be now contrived or designed by inferiors against Authority in any part of Christendom will as certainly period in the confusion of the founders, as it did in our last years distracted Spirits of *England* and *Scotland*, that would not be premonished by my predicting their destruction, till by folly and madness they heap'd loads of it both upon themselves and others, even some yet unborn: therefore let every soul be subject unto the higher Powers; for there is no Power but of God; whosoever therefore resisteth the Power, resisteth the Ordinance of God; and they that resist shall receive to themselves damnation, (Rom. 3. 1, 2.) who then can pretend to Christianity and Reason, that will not endeavour to shun such Rocks as at once endanger Ship, Cargo and Crew, Body, Soul and Posterity. It is not for Shrubs to contend with mighty Cedars: and therefore let such as pretend to be Christians, shew themselves so, in being advised by the wise man (Prov. 17. 14.) to leave off contention before it be medled with, and be obedient to the Government, that maintains them in their Lives and Liberties; for Solomon saith (Ecc. 8. 4.) where the word of a King is there is power, and who may say unto him, what dost thou? and (Prov. 19. 12.) the Kings wrath is as the roaring of a Lyon; but his favour as the dew upon the grass. How careful then ought men to be, to obtain the one, and avoid the other, as the only means to make themselves and Posterity happy? for nothing can be more prejudicial to both, than to dislike and condemn the Power and Decrees of lawful Kings and Princes, who at present admit of none; but more especially His present Majesty of Great Britain, who not only in this Quarter and Year, but several yet to come, will not be in the least subject to; but on the contrary able to correct the Insolencies of the greatest Potentate, much more those far inferior, especially while assisted by his mighty Parliaments, whom God grant long to unite, prosper and preserve from the Petticoat Treachery now too frequent amongst the Councils of Europe: for though Mercury be a small Planet, he can sometimes perform great things, but seldom for the better when posited and afflicted as at the aforesaid Eclipse and Ingress, and makes six Conjunctions with Sol, and three such tedious transits as he doth this year through A-quary, Gemini and Libra, which will at some certain times put great
stops

stops to (if not confusion among) the most deliberate Councils of Europe.

On the 14th of *January* there happens an Opposition of *Saturn* and *Mars* in the last degree of *Virgo*, which some Authors say threatens the world with more then ordinary calamity. *Haly (de Jud. Astr. p. 8. cap. 6.)* saith, *Quod ☿ & ♄ & ☿ est deterior eorum Conjunctione, & deteriores, ac maligniores significationes demonstrat.* The Opposition of *Saturn* and *Mars* is worse then their Conjunction, and demonstrates more dangerous and malignant effects. *Hæc oppositio significat quod homines in se invicem discordabunt, & persequentur semutuo odio; & cessabunt se familiariter invisere & detrahit quilibet alteri &c.* saith the same Author, the Opposition denotes that men shall contend and quarrel with each other; and shall pursue each other with mutual hatred, that they shall forbear former familiarities, and instead thereof be apt to calumniate each other.

The Figure of the Opposition is impossible to be obtained by any Tables or Rules whatsoever, because of the slow motion of *Saturn*, but at the first New Moon of the year, which happens but about four hours before it, I find the Figure nearly the same with that of the Vernal Ingress and *Saturn* both in the ninth house, which Authors say, signifies *Diminutionem fidei, & ablationem misericordiae atque pietatis, & studebunt homines quidem in alibus & horribilibus, rerum alienorum, & significat maerores, ac tristitias, & anxietates venturas in itinerantibus, in perigrinationibus suis, & longam moram in eis.* Diminution of faith and piety, less belief in promises, treaties or sacred oaths then ought to be, little compassion for the poor or distressed; men will delight in horrible actions, and to be meddling with other mens affairs more then is requisite or belongeth to them, whence ensueth great sorrows, anxiety and affliction; much hardship, peril, danger and disappointment will attend such as travel by Sea or Land: the Seas will be pestered by Storms, Tempests and Pyrates; and the Land with Tories and Robbers, if not something of more mischievous and dangerous consequence.

At the Vernal Ingress *Mercury*, Lord of the ninth, is hastening to an Opposition of *Saturn*, and *Mars* is the like to *Jupiter*, which together with the position of *Saturn* in the ninth in both this and the figure of the Opposition, and *Saturn* and *Jupiter* changing their Signs this year, and the other Configurations thereof considered, portend great alterations and changes in affairs both of Church and State, or

An Astrological Judgment on the Year 1686.

at least the broach or promotion of some new Sect, or Laws for settling or restoring of some old Religion or Sect in some part or other of *Europe*; but where in particular, I leave the infallible test of time to shew; and shall only inform you, that I expect *France* will be the chiefest place concerned therein; and great chopping and changing amongst such as are concerned in the Government of such matters, which may animate many turbulent Spirits of that Country or Nation where Providence shall dispose of the effect, to involve both themselves and others into grief, vexation and trouble: for there are a sort of people in the world that neither Reason nor Advice can direct or warn to be so wise. as to avoid running headlong into mischief: *therefore the Lord shall have no joy in their young men, neither shall have mercy on their fatherless and widows: for every one is a hypocrite, and an evil doer; every mouth speaketh folly: All his anger is not turned away, but his hand is stretched out still; for wickedness burneth as the fire, it shall devour the briars and the thorns (Isa. 9. 17, 18.)* For if God spared not the Angels that sinned, but cast them down to Hell, and delivered them into chains of darkness, to be reserved unto Judgment; and spared not the old world, but saved Noah the eighth person, a Preacher of Righteousness, bringing in the Flood upon the world of the ungodly; and delivered just Lot, vexed with the filthy conversation of the wicked; the Lord knoweth how to deliver the godly out of temptations, and to reserve the unjust unto the day of Judgment to be punished; but chiefly them that walk after the flesh, in the lust of uncleanness, and despise Government, &c. whereas Angels, which are greater in power and might, bring not railing accusation against them before the Lord; but these, as brute beasts made to be taken and destroyed, speak evil of things they understand not, and shall utterly perish in their own corruption, and receive the reward of unrighteousness, 1 Pet. 2. 4, &c. This is the purpose that is purposed upon the whole earth; and this is stretched out upon all nations: for the Lord of Hosts hath purposed, and who shall disannul it? and his hand is stretched out, and who shall turn it back? Isa. 14. 26, 27.

Certainly no age ever enjoy'd more (or made less use) of Gods abundant mercies than the present ungrateful, wicked generation, wherein *Vertue, Justice, and Compassion* fare like a Football in a frosty morning; but woe unto them that call evil good, and good evil, Isa. 5. 20. For he that justifieth the wicked, and he that condemneth the just,

An Astrological Judgment on the Year 1686.

just, even they both are an abomination to the Lord. Prov. 17.15: and yet when I cast my eye back to the Ingress, methinks I see (nay I feel) it abound: For besides what I have already mentioned, I find in both the last mentioned Figures the *Dragons-tail* afflicting the *Ascendant*, and in the last *Luna* separating from a *Square* of *Venus*, and applying to a *Square* of *Mars*; which to me seems as if the vulgar or common people of some Countrey or Nation were like to fall from one vexation, grief, misery, and trouble to another; but if so, let them thank their own vain, idle, fearful suggestions, murmuring, grumbling, and repinings, that no reason can perswade to believe even their own eyes, till (like *Thomas a Didimus*, John 20. 25.) *they feel the wounds, neither will they be perswaded though one rose from the dead*, Luke 6. 31. *For this peoples heart is waxed gross, and their ears are dull of hearing, and their eyes they have closed*, Mat. 13: 15.

'Tis like *Jupiter* in the *Eleventh* may in some measure mitigate these evils; for *Haly* (pars 8. cap. 6.) saith, *Fuerit Jupiter in undecima domo, multiplicabuntur fortuna & habebunt homines bonam, vitam & longam in toto Climata, illo, &c.* if *Jupiter* be in the *eleventh House*, happiness shall be multiplied upon men, and they (who are born in that Climate) shall generally be blessed with a good and long life; and poor *Mercury* hastening to a trine of him, puts his helping hand to this pious work. But alas, as *Bethem* (*Apho* 31). saith, *Planeta in Domo inimici sui, est ut vir in Domo alterius, inter quos jam advenit odium & ira*; a Planet in the house of his enemy (as *Mercury* is here in *Pisces*) is like one in another mans, between whom there is already rancour and malice, and therefore incapable of doing any more good, but wishing well; and besides *Jupiter* is but weak, and with the part of fortune in the tenth, respects the assistance and filling the Coffers of Princes.

Haly (cap. 7. lib. 8.) saith, *Mars in quinta pregnantibus damna, & graves labores minature*; *Mars* in the fifth hinders Conception, and causeth Miscarriage and hard Labour, and much more, as now in *Conjunction* of *Venus*, *Square* of *Luna*, and *Opposition* of *Jupiter*, which also threatens great mortalities to women, and young children, and many men of ripe years, by some Epidemical Distemper; from *Plague*, *Pestilence* and *Famine*, from *Battel* and *Murder*, from *sudden Death*, all *Sedition* and *privy Conspiracy*, from all false *Doctrine* and *Heresie*, *hardness of heart*, and *contempt of thy Word* and *Commandment*, Good Lord deliver us.

ADVER-

ADVERTISEMENT.

THe Author hereof Teacheth *Arithmetick, Geometry, Trigonometry, Navigation, Astronomy*, the use of the *Globes, Dialling, Surveying, Gaging, Measuring, and the Art of Astrology* in all its parts; and by it shews the nature of any Distemper, whether Curable or not; and if curable, Cures all Distempers incident to humane bodies, with as much ease, safety, secrecy, and expedition as can be expected; and for the sake of the poor and distressed at a distance, now sells his *Elixir Cardiaca* at eighteen pence per Bottel.

If it were (or be) possible for any natural means to prolong life beyond its limited time, it must be this *Elixir*, it being the only Remedy ever known, or yet discovered in the world, for restoring, preserving, and maintaining *Health and long Life*, resisting and expelling the *Pestilence, Measels, Small Pox, Spotted-Fever*, all sorts of *Poyson* and *Putrefaction*. And Curing the *Vertigo, Lethargy, Head-ach, Megrims, Apoplexy, Falling-Sickness, Cramps, Convulsions, Fits of the Mother, Ptytick, wheezing, Shortness of Breath, Colds, Coughs, Catarrhs, Consumptions, Hecticks, sour and bitter belchings, dangerous Surfeits, Corruptions and impurities of the blood, and humours, vomiting, looseness, Lask, Flux, and Bloody-Flux, spitting and pissing of blood, eruption of veins, bleeding at the nose or other parts, old bruises, violent pains and aches, obstructions, Chachexy, Green sickness, Rickets, Jaundice, Dropsey, trembling, or palpitation of the heart, fainting, Hypochondriack melancholly, Spleen, Pleurisie, stitches, Palsie, biting of mad Dogs, or other venomous creatures, Calentures, weak and benumbed members, shrinking of the Sinews, and the Countrey Disease.*

It gives present ease and cures the most wracking torments of the Ghout, Rheumatism, Stone or Gravel in the Reins or Bladder, Strangury, Iscury, Disury, heat, sharpness and stoppage of Urine, Cholick and Black Passion; all manner of Stoppage, and Pain either in the Head, Ears, Stomack, Bowels, Sides, Spleen, Pancrase, Limbs, Joints or other parts; stops all Defluxions of Rheum falling upon the Eyes, Teeth, Lungs, &c. dissolves congeal'd Blood, Bruises, black or blue marks got by blows or falls; it heals Ulcers and other defects of the Liver, Lungs, Reins and Bladder and mightily strengthens the Heart, and Body in general, and every Limb and part thereof in particular; revives decayed, weak, melancholy creatures, and makes a dull, heavy Body, lively and agile; it adds strength and vigor to old age, and causeth a delicate young, fresh and lovely Countenance, Potency in
both

both Sexes, a fruitful Womb, Conception and speedy Delivery to Women in travel almost without any pain, yet the best of Remedies to prevent Miscarriage : it provokes the stoppage of Nature in Women, yet speedily stops both them and the Ruining of the Reins, voluntary shedding of Seed and the like ; and to be short, it is so great a friend to Nature, and an enemy to all Diseases, that there is scarce any able to resist its forcible effect in humane bodies : no ! not the greatest Poyson of the Rattle Snake, which it expels (if taken in time) together with all other venomous, contagious, malignant and most dangerous Distempers incident to the bodies of men, women or children, without Vomiting, Purging, or any ways disturbing the most weak, tender or delicate Body : its Operation being only by Urine, breathing Sweats, insensible transpiration, and fortifying of all the Spirits both vital and animal in the center, and in performance thereof is so forcible, that many when so weak that they could not take any thing inwardly, have to admiration recovered by only bathing the Stomack with it. It keeps many years, & may safely be taken at any time or season, in any Climate hot or cold, either by Sea or Land, by young or old, according to the printed Directions given with it. Each Bottle contains three Quarters of an Ounce, which is enough for the strongest body to take at twelve times.

T Here are to be had at *Samuel Helshams, William Normans, Patrick Campbells and Will. Westons,* and at the rest of the Booksellers in *Dublin.*
